Third-Party Intelligence

Make fast, effective,
data-driven decisions
on third-party risks

Challenge

Third-party vendors are a critical component of your business, but there is a price to these relationships. Each vendor introduces potential risks, and oftentimes are not held to the same security standards and practices as your organization, making them an attractive target for adversaries to gain access to your network and data without you knowing it.

Organizations often lack the information needed to respond to third-party incidents, only monitor a subset of their vendors, and are limited to a point-in-time view of risks. Staying ahead of third-party risks requires more than a scorecard report or a credit rating score.

Solution

Gain an external view of the security posture of your vendors and partners. Third-Party Intelligence provides an intelligence-driven perspective to help assess and continuously monitor third-party vendors that may put your data, intellectual property, and business operations at risk.

Get comprehensive, real-time visibility into threats or breaches, malicious network traffic, and dark web attention. Access intelligence from continuous monitoring of over 5 million organizations and compare risk across 1 million technology products to avoid unexpected exposures, protect your systems and assets, and keep business running smoothly.

Key Benefits

- Respond quickly to third-party risks with real-time alerts and context, mitigating potential damage.

- Reduce complexity with automated data collection and analysis to alleviate manual workloads.

- Improve decision-making with actionable insights and essential information to make informed decisions about third-party risks.

- Report on overall third-party risk or vendor-specific risk with easy-to-understand assessments.

Key Use Cases

- Perform third-party risk assessments for potential vendors or products.

- Monitor third-parties on a continuous basis.

- Respond to third-party incidents with real-time alerts and context.

- Report on risk stemming from your third-party ecosystem.

Over 1 million unique sources	Third-Party Intelligence indexes from dark web sources, ransomware extortion sites, malicious network activity, vulnerable corporate infrastructure, breach disclosures, SEC filings, and more.
Continuous monitoring	Third-Party Intelligence monitors more than 5 million organizations around the clock.
Company Risk Scores and risk profiles	See both current and historic views of a third-party's risk history with a clear and quantifiable Risk Score from 0 - 99, along with helpful context on any changes to their risk posture.
Actionable playbooks	Get alerts, context, and recommended actions in real time to better identify and respond to thirdparty threats.
Fourth-party risk	Automatically identify common fourth parties to find emerging threats across your vendor ecosystem.
Product risk assessments	See risks associated with individual products versus an entire company. View Risk Scores for 1 million technology products based on current and potential exploitability.
AI-enabled company comparison report	Easily evaluate new and existing vendors with better visibility into their current state and risk history.
Vulnerability exposure reporting	Eliminate time-consuming research and vendor communication cycles with the ability to promptly assess vulnerabilities in their tech stack.
Finished Intelligence	Access detailed analysis and context on major third-party security incidents from Insikt Group, Recorded Future's threat research team.
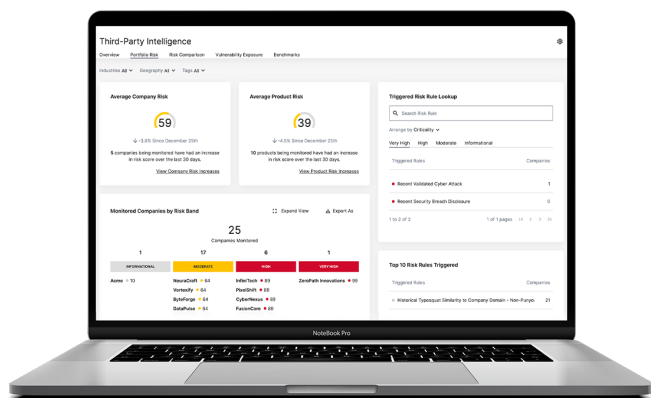

"We sharpened a lot of processes by introducing Third-Party Intelligence to our risk assessments, so we can make informed decisions about the vendors we do business with. (Recorded Future) gives us an opportunity to launch an investigation to see what the vendor has access to, what we need to be concerned about, and how we can better protect ourselves"

Nathalie Salisbury
Strategic Threat Intelligence Analyst, Novavax
